

Installing of a WS2812b library

1. Start your CubeMX Project, set debug and set RCC to External resonator.

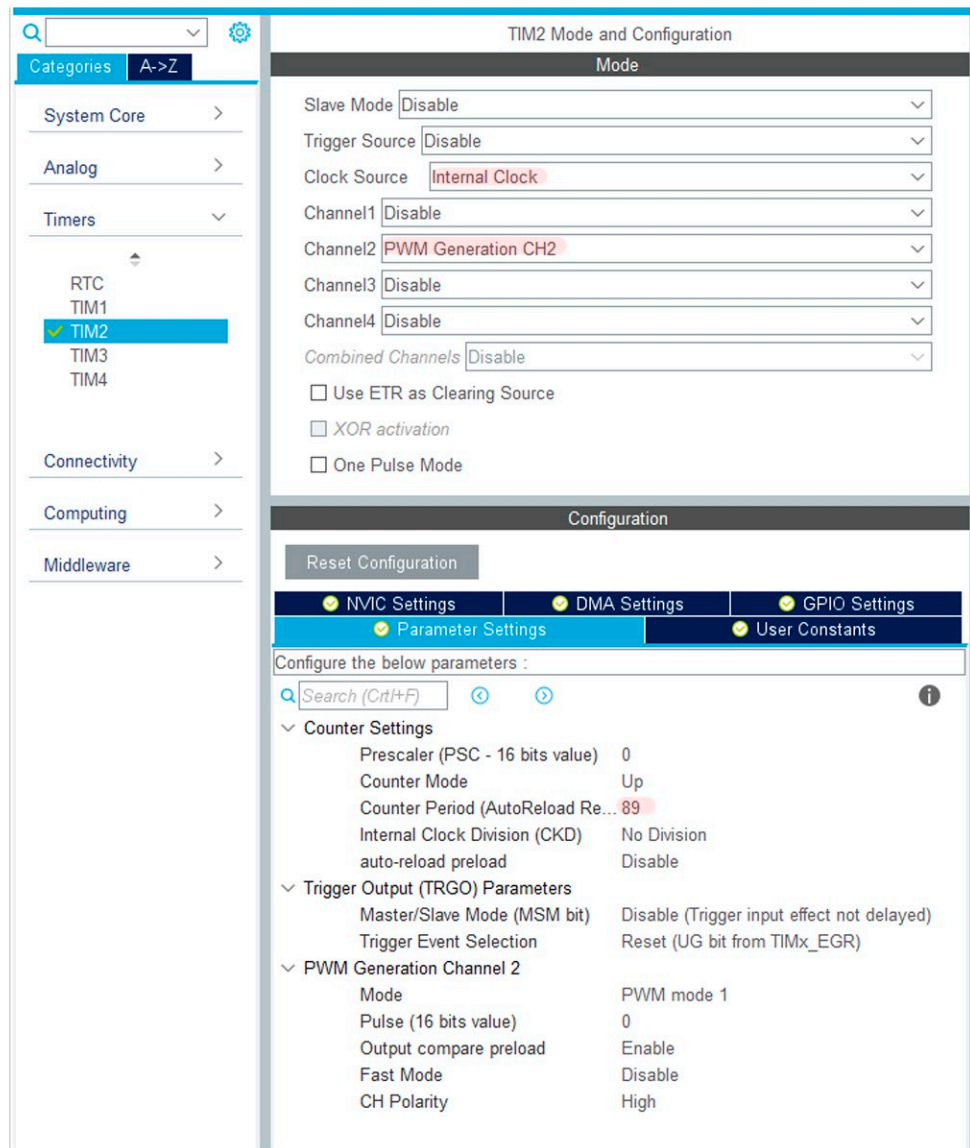

2. Set APBx clocks to 72 MHz

APB1 for TIM2-7, TIM12-14
APB2 for TIM1, TIM8-11

Installing of a WS2812b library

3. Configure preferred timer and channel.
4. Set Timer counter to 89.

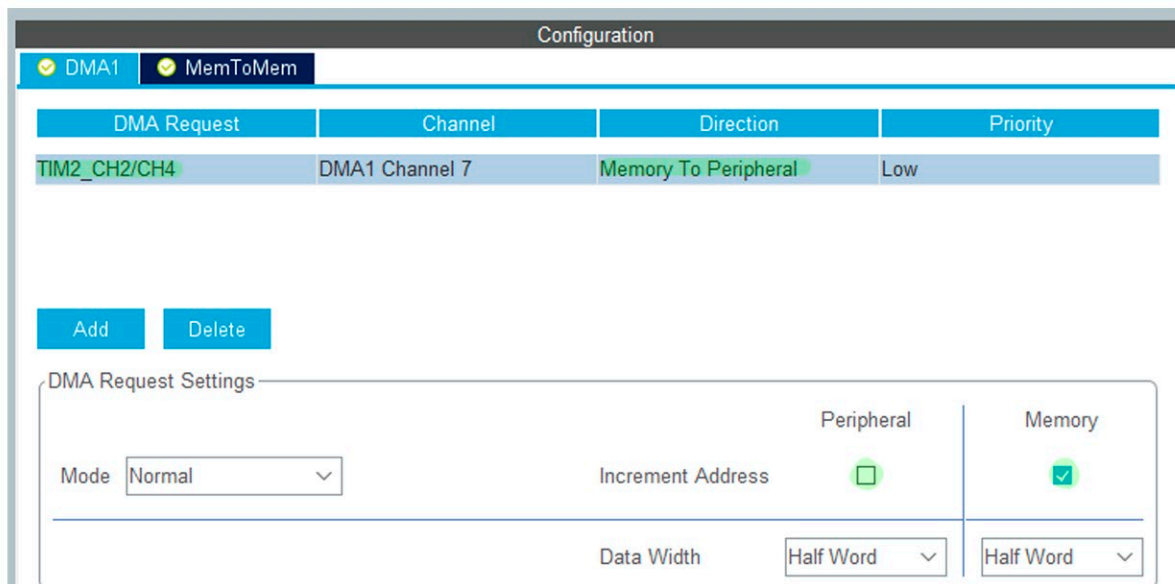

Why 89? You have 800 kHz LED signal freq. You need to divide APB clock by signal fq. APB speed is 72 MHz, i.e 72×10^6 Hz.

$$\frac{72 \times 10^6 \text{ Hz}}{8 \times 10^5 \text{ Hz}} = 90 \Rightarrow 89, \text{ coz' variable starts from 0}$$

Installing of a WS2812b library

5. Set up DMA channel.

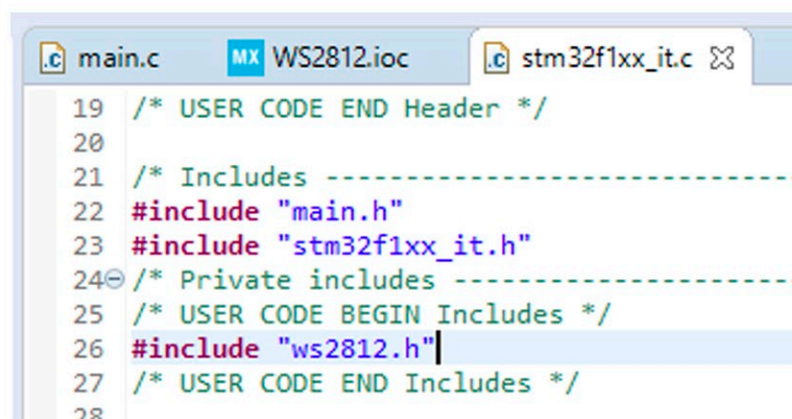

6. Now save .ioc file and generate code.

7. Add the library to your source destination.

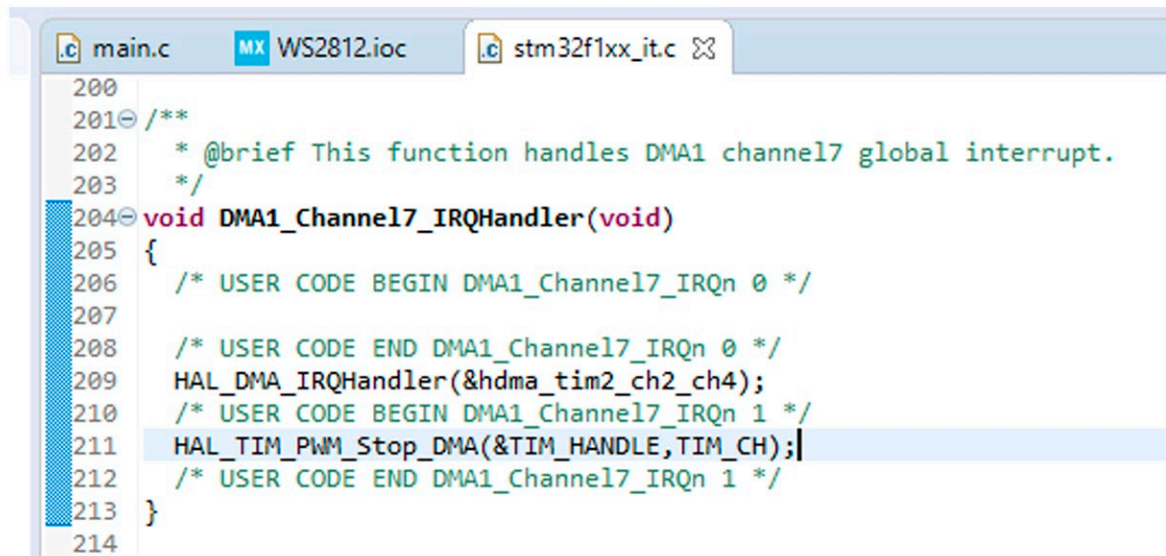

8. Search for stm32xxxx_it.c file.

9. Include lib header file.

Installing of a WS2812b library

10. Search for your IRQ Handler and add:

```
200
201 /**
202  * @brief This function handles DMA1 channel7 global interrupt.
203  */
204 void DMA1_Channel7_IRQHandler(void)
205 {
206     /* USER CODE BEGIN DMA1_Channel7_IRQn 0 */
207
208     /* USER CODE END DMA1_Channel7_IRQn 0 */
209     HAL_DMA_IRQHandler(&hdma_tim2_ch2_ch4);
210     /* USER CODE BEGIN DMA1_Channel7_IRQn 1 */
211     HAL_TIM_PWM_Stop_DMA(&TIM_HANDLE, TIM_CH);
212     /* USER CODE END DMA1_Channel7_IRQn 1 */
213 }
214
```

`HAL_TIM_PWM_Stop_DMA(&TIM_HANDLE, TIM_CH);`

11. Add library to your main.c file.

```
22 /* Includes -----
23 #include "main.h"
24
25 /* Private includes -----
26 /* USER CODE BEGIN Includes */
27 #include "ws2812.h"
28 /* USER CODE END Includes */
29
```

12. Now it is ready to work!

Installing of a WS2812b library

10. Search for your IRQ Handler and add:

```
.c main.c  MX WS2812.ioc  .c stm32f1xx_it.c  ⌕
200
201 /**
202  * @brief This function handles DMA1 channel7 global interrupt.
203  */
204 void DMA1_Channel7_IRQHandler(void)
205 {
206     /* USER CODE BEGIN DMA1_Channel7_IRQn 0 */
207
208     /* USER CODE END DMA1_Channel7_IRQn 0 */
209     HAL_DMA_IRQHandler(&hdma_tim2_ch2_ch4);
210     /* USER CODE BEGIN DMA1_Channel7_IRQn 1 */
211     HAL_TIM_PWM_Stop_DMA(&TIM_HANDLE, TIM_CH);
212     /* USER CODE END DMA1_Channel7_IRQn 1 */
213 }
214
```

`HAL_TIM_PWM_Stop_DMA(&TIM_HANDLE, TIM_CH);`

11. Add library to your main.c file.

```
.c *main.c  ⌕  MX WS2812.ioc  .c stm32f1xx_it.c
22  /* Includes -----
23  #include "main.h"
24
25  /* Private includes -----
26  /* USER CODE BEGIN Includes */
27  #include "ws2812.h"
28  /* USER CODE END Includes */
29
```

12. Now it is ready to work!
